To whom it may concern,

Do you want to Get Stuff Done? You've come to the right place.

A bold statement, I know, but as you'll see I have an excellent history of doing exactly that. Enough so that I'm willing to try and impress you right off the bat with it. That's by far not my best selling point, though, and is instead the result of what happens when you put me with other excellent people. I try hard to bring out the best in those around me, to help solve hard problems, make work as easy as possible, and set us up for success. I'm a team builder, not just a team player.

I've led the successful bid for a Navy contract against a much larger competitor, modernized systems from monolithic pieces of software to more distributed systems, developed local- and web-based 3d applications, overhauled UI's to streamline the user experience and improve error handling, and so much more. I am a true full-stack engineer, through and through. I am just as comfortable working in front end technologies like TypeScript and React as I am in backend technologies like Node.js, .Net Core, and Postgres SQL through a variety of cloud platforms like AWS, Microsoft Azure, and Google Cloud.

Glancing over my resume, you might also discover what some would consider a weakness: my career has been, let's say, "extremely interdisciplinary". I've worked on a wide range of software in a wide range of languages and environments. This is a point of pride for me, as it's allowed me to show time and again that it doesn't matter what I'm working in, I will quickly find my way to success. It would be nice to have focused on a language or two for years, but having experienced the unique paradigms each discipline brings has given me the wisdom you'd expect from a truly seasoned developer.

So please, take an eye over my resume. Having been in your position, I know how fun a neat cover letter and a quick resume can be. I've done my best to give you a brief context of what I can do and what I've done it in, and hopefully this letter has given you an idea of the sort of person you'd be dealing with. I hope I get to hear from you!
